Policy context

**Fiscal Projections** → (1) Denominator: GDP  
Issues (2) Nominator: Pension,  
Health, Aged care cost

(Australian Treasury  
modelling framework)

# Fiscal projections: GDP

$$GDP = \frac{GDP}{Hrs} \times \frac{Hrs}{Emp} \times \frac{Emp}{LF} \times \frac{LF}{Pop15+} \times Pop15+$$

Labour productivity

Average hours worked

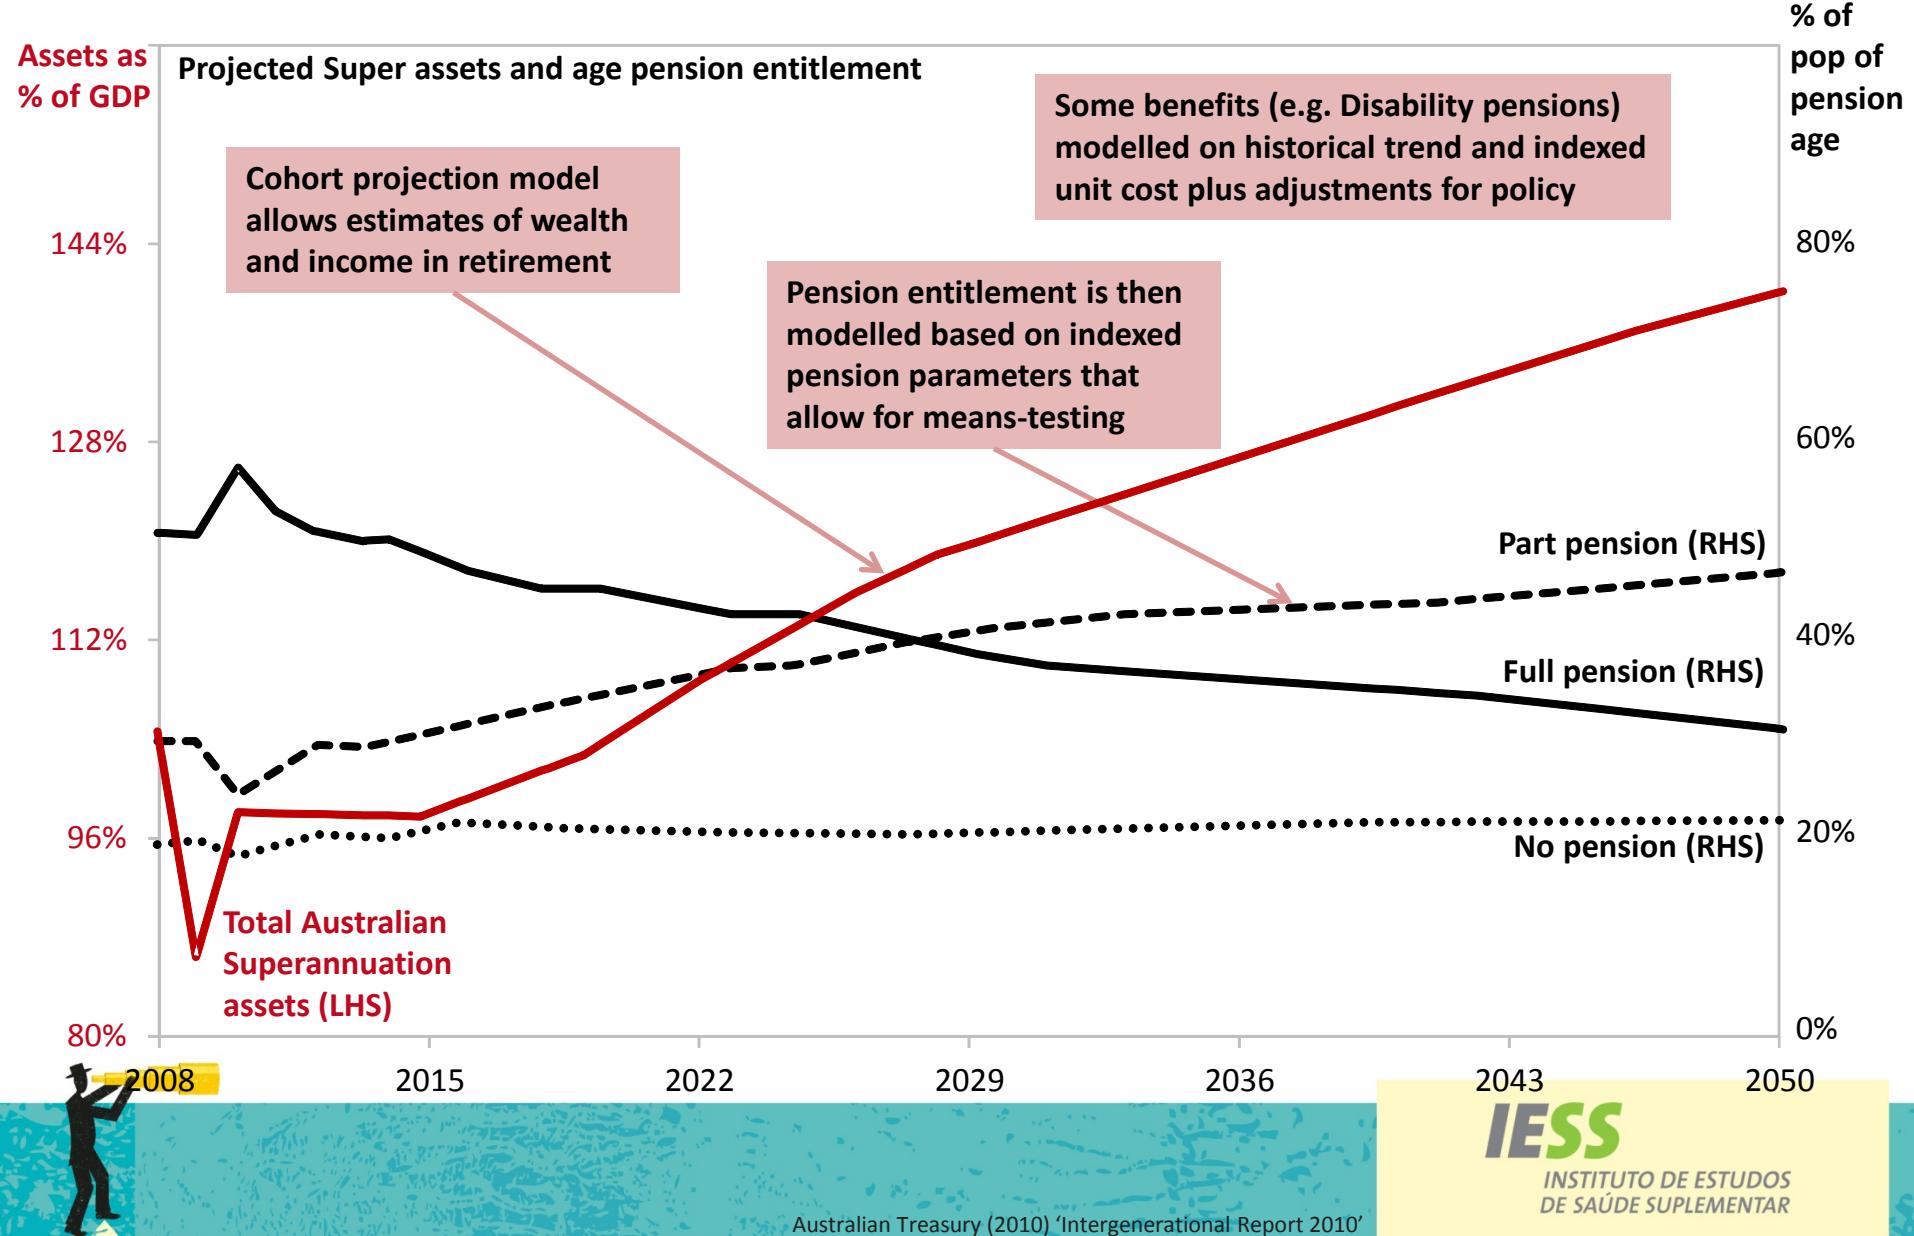

Employment ratio

Participation rate

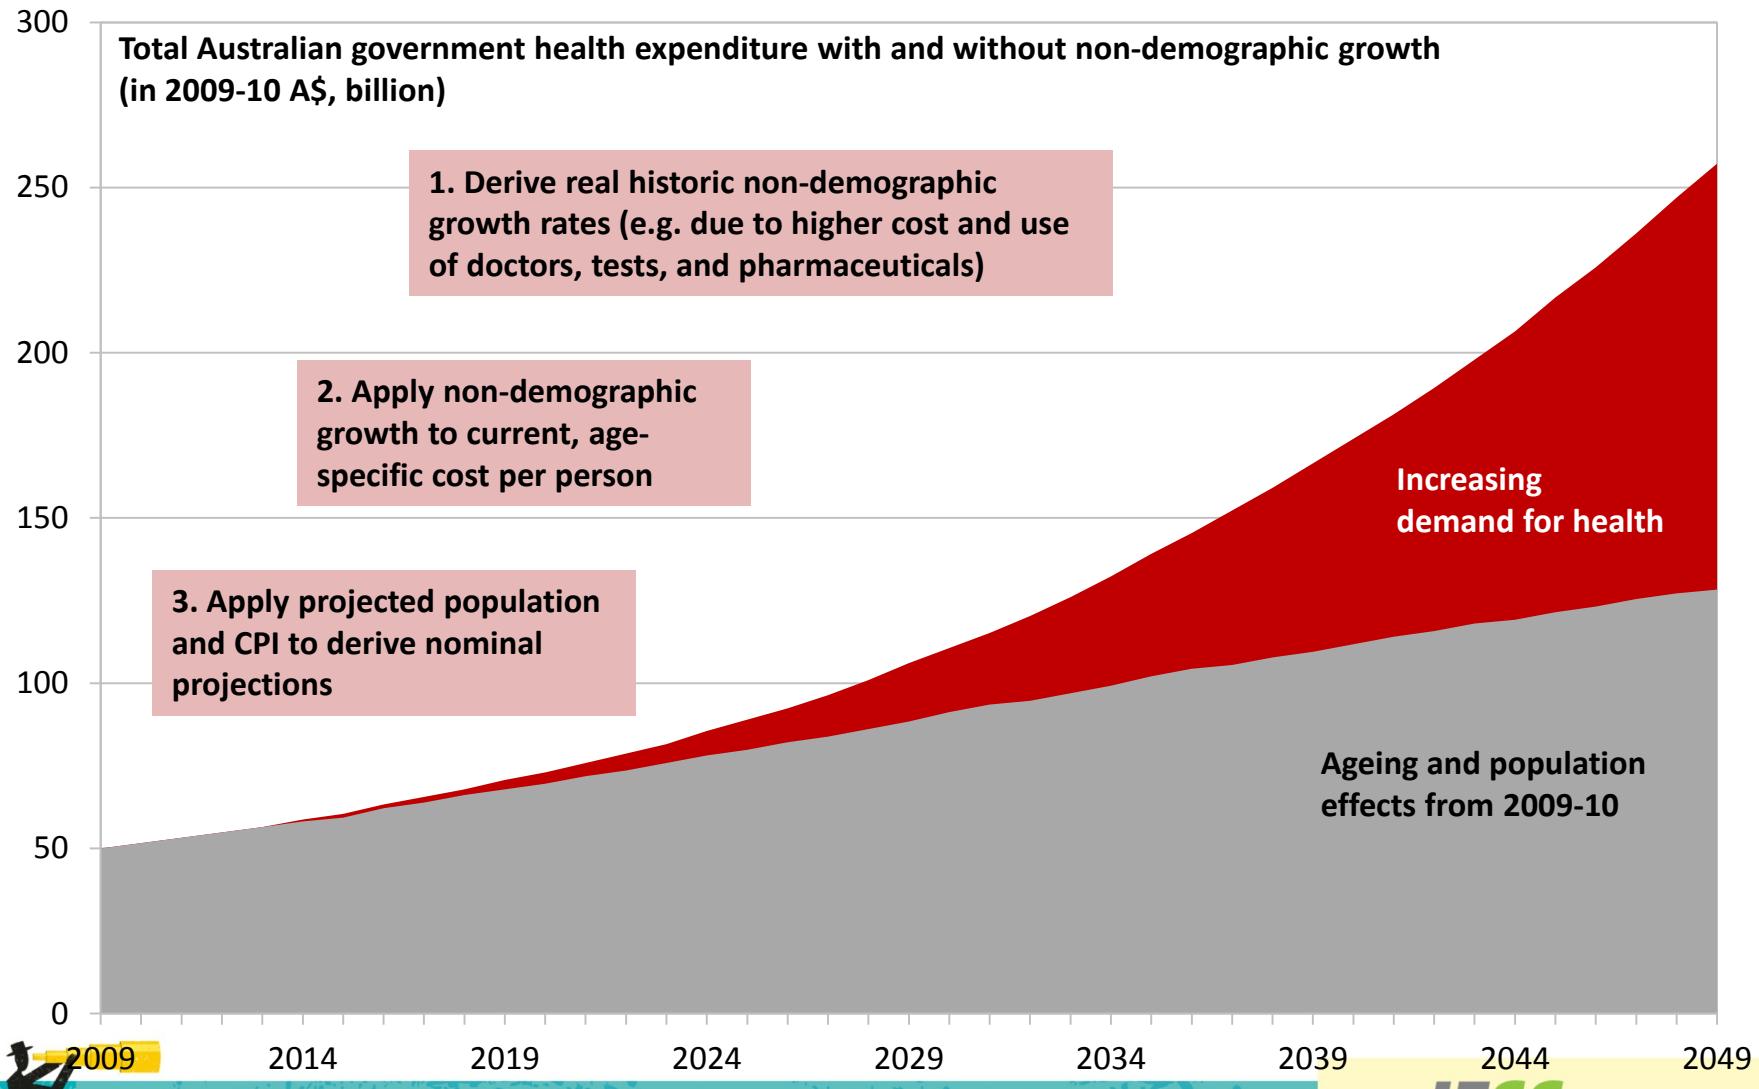

Population aged 15 and above

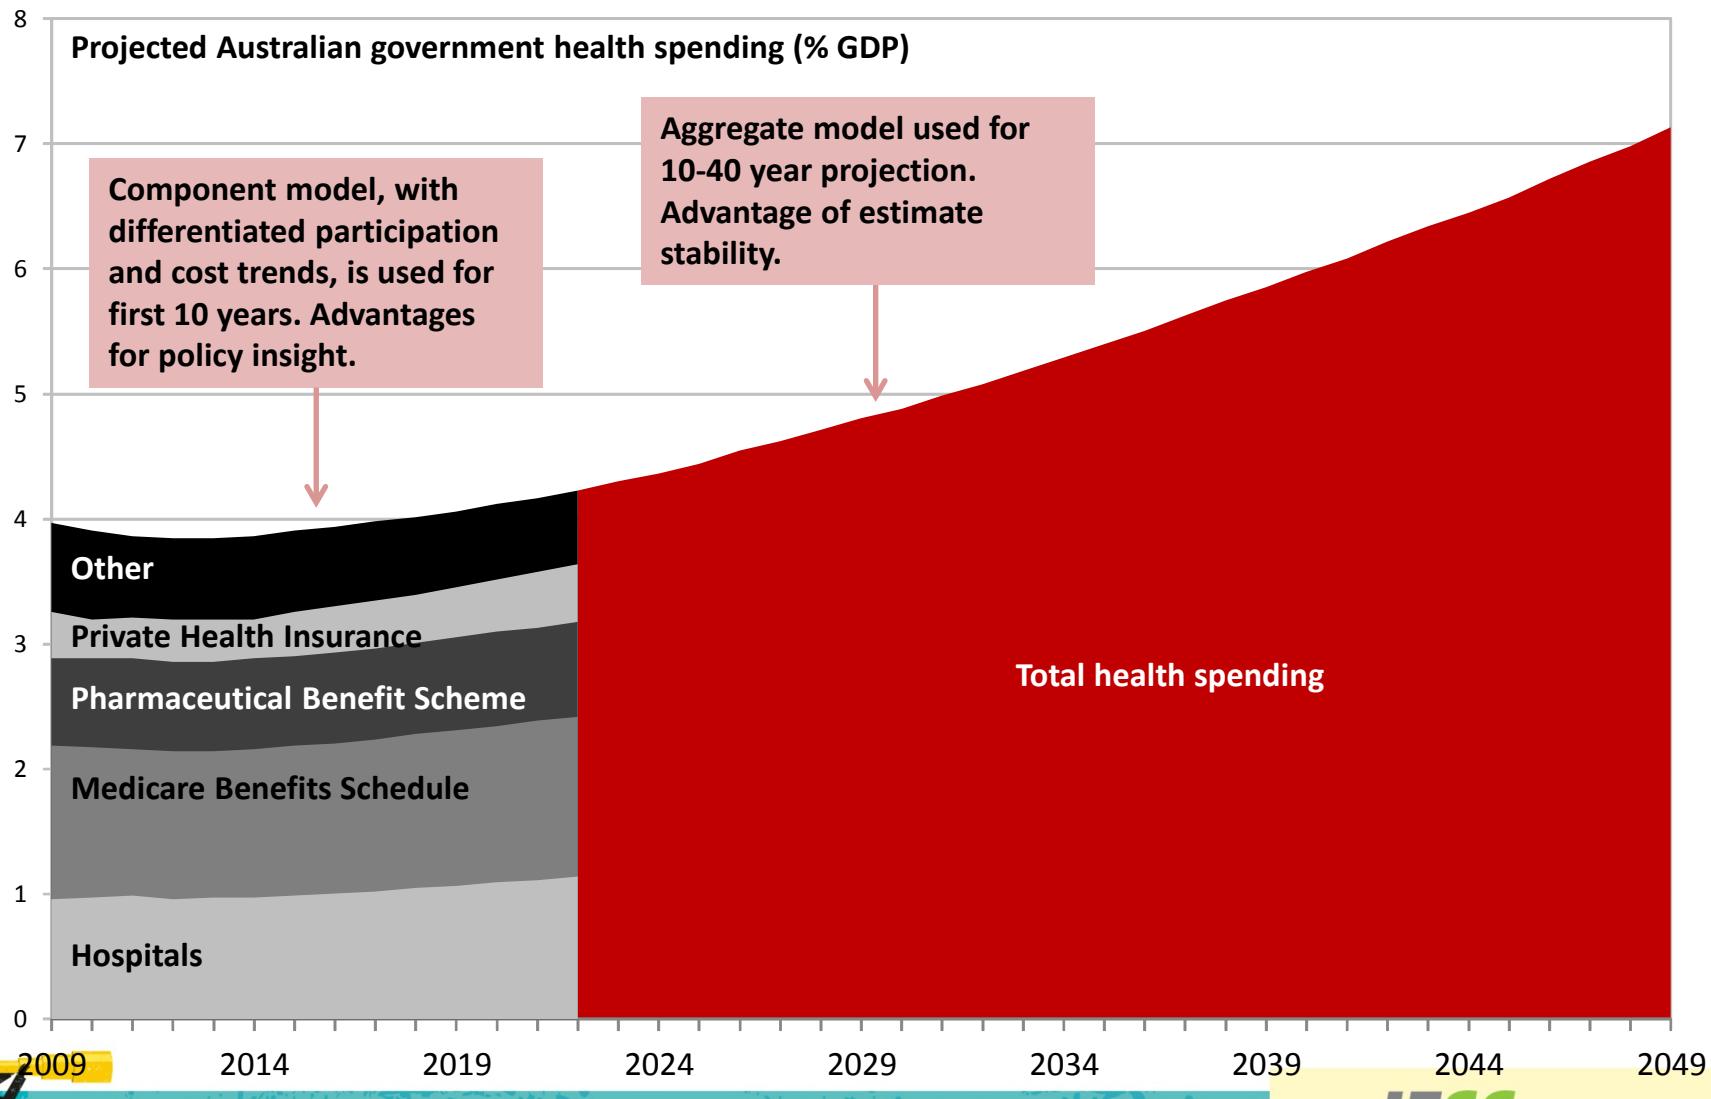

# Fiscal projections: Pension expenditure

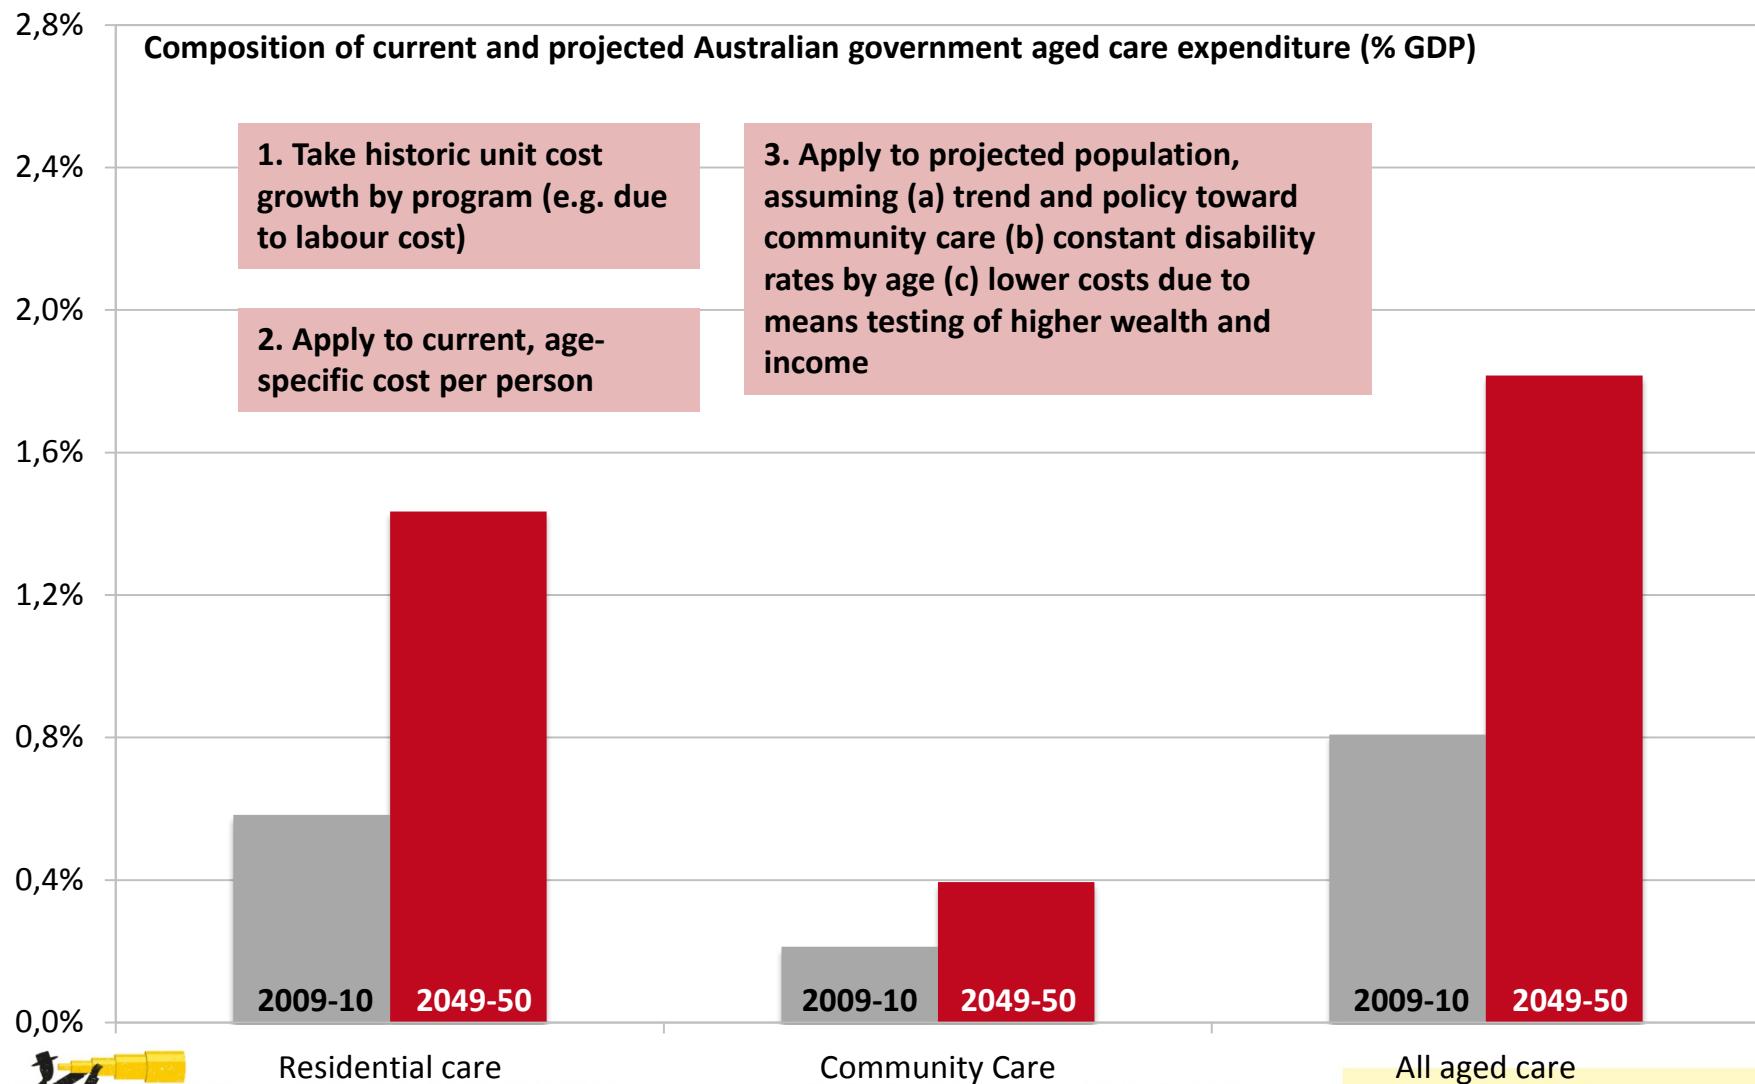

# Fiscal projections: Health expenditure

# Fiscal projections: Health expenditure

# Fiscal projections: Aged care expenditure

Residential care

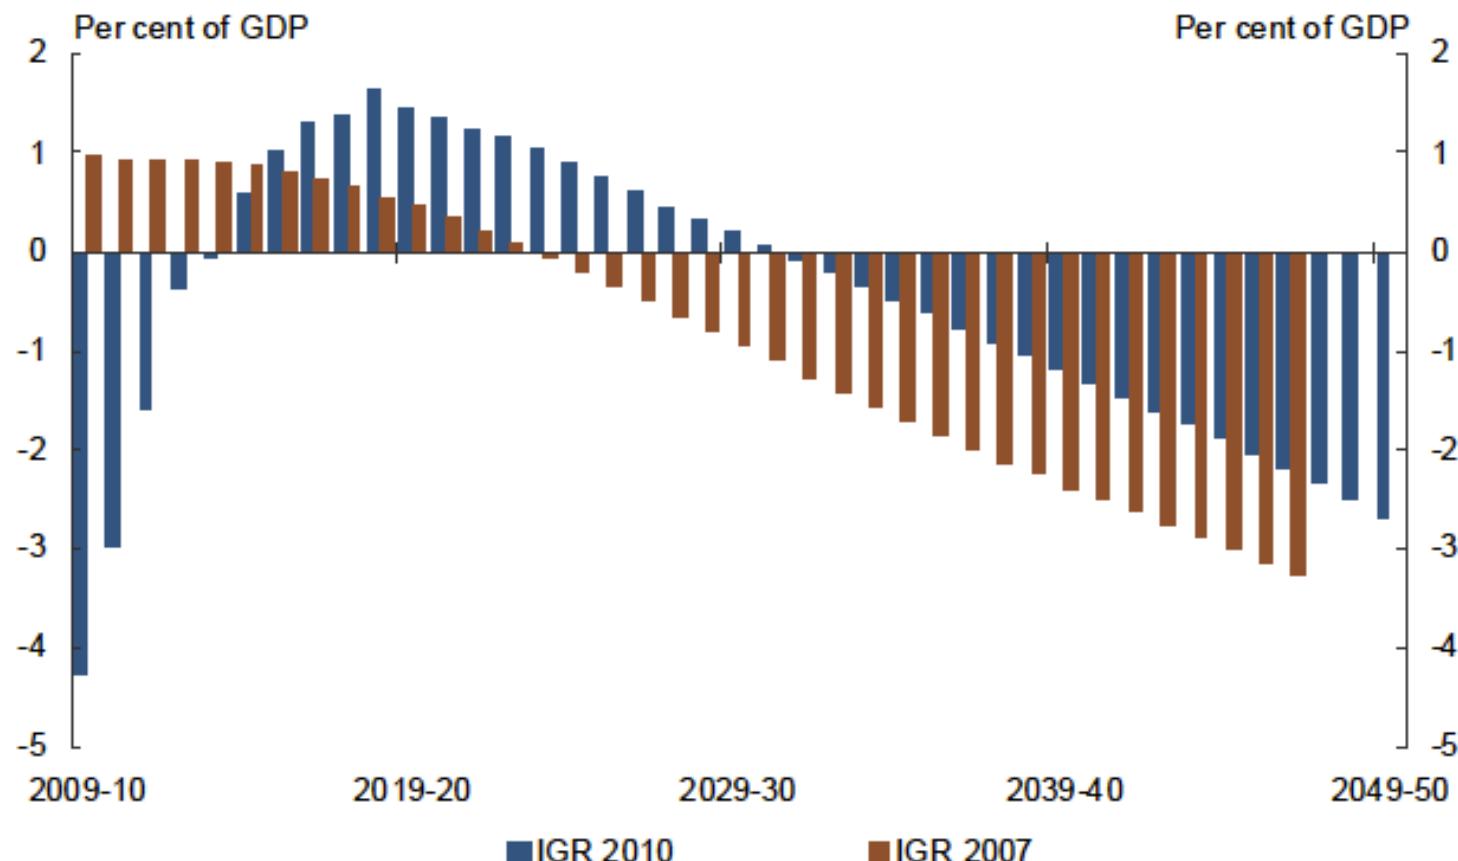

Community Care

All aged care

**IESS**

INSTITUTO DE ESTUDOS  
DE SAÚDE SUPLEMENTAR

# Projected Fiscal Gap

Note: The fiscal gap is total Australian government receipts minus total Australian government payments (excluding interest).

Source: Treasury projections.

Policy context  
Fiscal Projections  
**Issues**

**IESS**

INSTITUTO DE ESTUDOS  
DE SAÚDE SUPLEMENTAR

# Projection issues

- Overall **commendable** and internally consistent modelling
- Some assumptions better as **scenarios** (e.g. fertility)
- Some assumption **myopia** (e.g. migration, participation)
- Some assumptions **unclear** (e.g. Super decumulation)
- Some assumptions **imperfect** (e.g. non-demographic health cost growth not linked to income by age)
- Assumption / methodological **variation** between projections
- No **policy** options or specific policy / budget related breakdowns to judge policy change
- If it is an **assessment** of fiscal sustainability, does a projected deficit (2.75%) mean governments failing assessment?
